

Autonomous digitally controlled tracking vehicle

Line Follower Robot

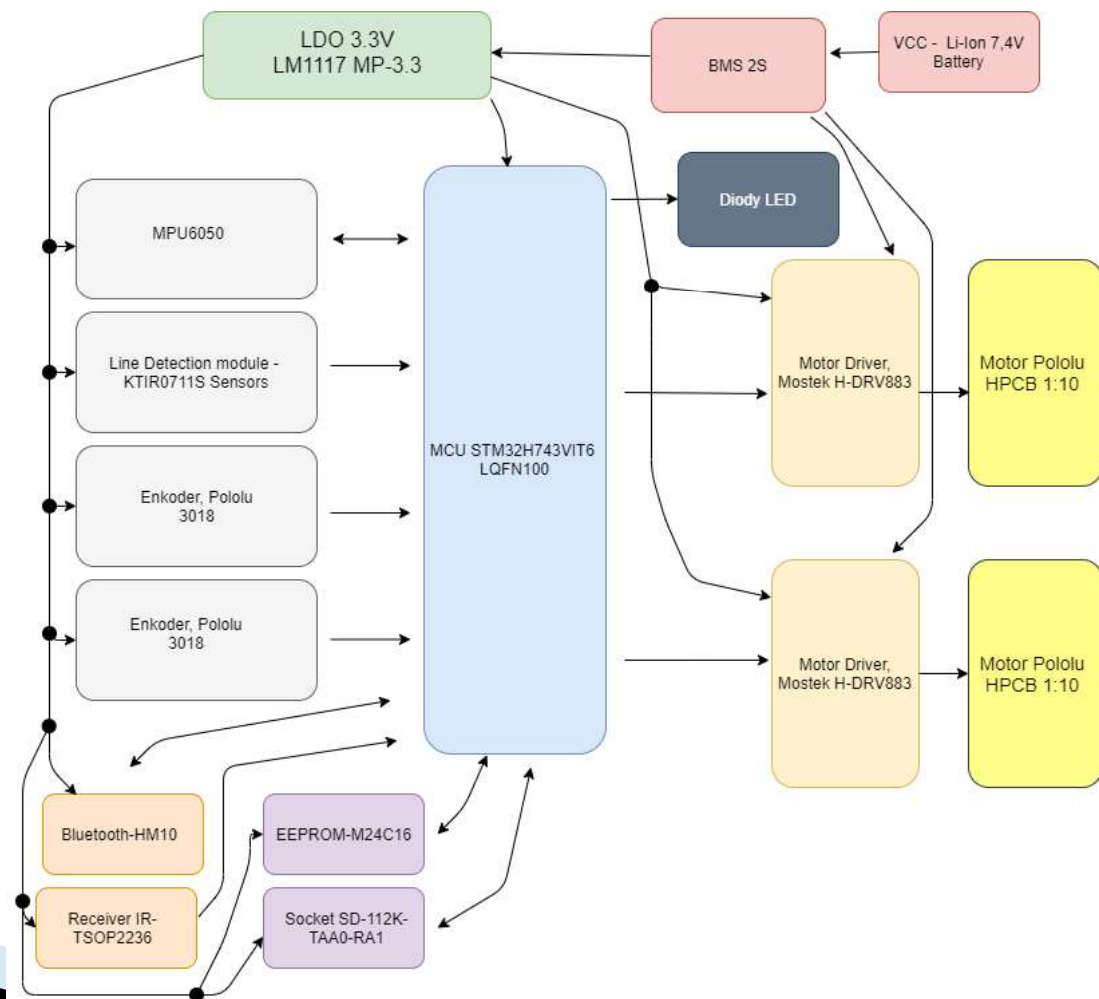

Purpose:

- ▶ The purpose of this project was to develop the concept and practical implementation of a model of an autonomous digitally controlled tracking vehicle. This goal has been achieved.

Afer Review of autonomous vehicles

- I decide are to build robot which is called Line Follower.

Electrical structure:

- ▶ The electrical structure of the vehicle model was made from designed printed circuits in Altium Designer:

PCB was ordered from China –
Company: JlcPCB

Housing Model

- ▶ The housing model for robot I designed using Solidworks (look on picture below).
- ▶ In the next step – created parts of housing was printed on 3D Printer.

Finally Practical realization:

MCU Source Code?

- ▶ Few kilometers... of code in ANSI C language.
- ▶ I tried writing the code following the rule: KISS – “*keep it simple, stupid*” or “*keep it stupid simple*”.
- ▶ I create the source code on bare metal, it means without any System. In my opinion in good style. The application is shared on layers and files, so the code should be understandable.

Mobile Application

- ▶ For convenience– wireless communication to modify parameters using a Bluetooth module installed in the robot.

Digital representation of the route

- ▶ Using the equation below it is possible to create digital representation of the route.

$$\left\{ \begin{array}{l} x_i = x_{i-1} + \frac{1}{2} \cos(\theta_{i-1}) \cdot (\Delta l_r + \Delta l_l) \\ y_i = y_{i-1} + \frac{1}{2} \sin(\theta_{i-1}) \cdot (\Delta l_r + \Delta l_l) \\ \theta_i = \theta_{i-1} + \frac{1}{b} \Delta l_r + \Delta l_l \end{array} \right\}$$

Tracking using speed profile:

What i would say?

- I accelerate on the straights and slow down the robot before the turns

Short Video:

EnglishPresentationAtTheUniversity.mp4

This project on my github:

If the design is interested for you, check my github repository:

▶ https://github.com/trteodor/FAST_Line_Follower_STM32H7

Or:

▶ <https://tiny.pl/9cgn7>

The repository consist:

- ▶ MCU Source,
- ▶ Schematics, PCB,
- ▶ Housing ,
- ▶ Documentation,

evrything what is necessary to create the robot.

If you can, please give me a "star" for the repository ☺

When creating this presentation, I really didn't want to go into details. I just wanted to show the effect of my work. (Fyi)

Curiosity:

28.11.2021 – Robot competition in Rzeszów: <https://robomotion.com.pl/>

I will take part in them, because I'am curious how my design will compare with others Line Follower robot.
